

## Triple Diamond Energy Corp Begins Two Additional Wells in Sportsman Lake Field Program in Oklahoma

*Triple Diamond Energy Corp. (TDEC) has commenced drilling the third well in a four well program located in Seminole County, Oklahoma.*

ADDISON, TX - October 13, 2008 - With the first two wells in Seminole County drilled and logged, Triple Diamond Energy Corp. commenced drilling of its third well in the Sportsman Lake Field. TDEC began drilling the first well in the program in August and has the fourth well in the area scheduled to start early in the third week of October.

The four wells are located on a large geological formation known as the Sportsman Lake Field. This area of Proven Undeveloped Producing Reserves was previously undrilled, however reports have indicated the high structure contains a minimum of 100,000 barrels of attic oil.

Before spudding the well, Triple Diamond Energy Corp. received regulatory approval from the Oklahoma authorities as well as all necessary leaseholds and mineral agreements required for the program. This provides the oil and gas exploration company the permission it needs to access the land and pull the oil from below the surface. Then, surveys of the area were used to define the ideal location for the well sites and the drilling pads.

"This well will be drilled up to 5,000 feet below the surface to reach the top of the geological formation. Once that is complete, we will log and equip it so the well can be put online and start producing oil," said Chris Jent, an officer of Triple Diamond Energy Corp.

**About Triple Diamond Energy Corporation:** Triple Diamond Energy Corp. (<http://www.triplediamondenergy.com>) specializes in oil and gas exploration and development. A team of experts with more than 35 years experience in this and other successful business entities manages the private corporation. TDEC is based in Dallas, Texas.
