

Triple Diamond Energy Corp. Completes Drilling and Begins Logging of Two Wells in Oklahoma Drilling Program

ADDISON, TX - September 22, 2008 - Triple Diamond Energy Corp. (TDEC) reported the drilling of two wells in Seminole County, Oklahoma is complete and logging is set to start. Oil production will commence once the completing and equipping process has concluded.

The Texas oil and gas exploration company started the drilling process for the Seminole County portion of the program in August on the previously undrilled geologic structure of the Sportsman Lake Field. The pair of wells will pull oil from the Proven Undeveloped Producing Reserves located in the high formation.

With drilling complete, using electrical measurements an e-log will map out the structure and locate the tops of the geological formations. This will allow TDEC to determine the best possible hydrocarbon bearing zones to target. Triple Diamond Energy Corp. can then install the production casing and perforate the zone.

"Once the completion and equipping processes are complete, the two wells can begin extracting oil. From there, it will be processed and refined into various fuel and petroleum products," says Chris Jent, an officer of Triple Diamond Energy Corp. (<http://www.triplediamondenergy.com/>)

Reports have shown the area to contain a minimum of 100 000 barrel of attic oil. Oklahoma is presently in fifth place in crude oil production in the country producing 8.8 percent of the natural gas and 3.3 percent of the crude produced in the US.

About Triple Diamond Energy Corporation: Triple Diamond Energy Corp. (<http://www.triplediamondenergy.com>) is a private corporation that was formed as an independent producer of oil and natural gas and is located in Dallas, Texas. The management team at Triple Diamond Energy Corporation has over 35 years combined experience in the successful operation of profitable business entities including the oil and gas industries.
